EXECUTIVE FIT BRIEF

The glove-fit leadership model

The role asks for a rare intersection. Russell's career already operates there.

THE RARE COMBINATION

Advanced manufacturing

Thirteen years across R&D, production, strategic acquisition, operations, and director-level leadership in advanced electronics and high-reliability environments.

Customer-backward scale

Amazon Prime Pittsburgh launch and 24/7 execution supporting approximately five million second-day orders annually.

Quality and operating discipline

Quality systems, root cause, standard work, process controls, Lean, Gemba, performance measures, and escalation routines.

Robotics and digital operations

Current transformation across production, quality, purchasing, support, engineering issue flow, ERP, telemetry, and AI-assisted workflows.

Technical translation

Materials science and physical chemistry grounding, technical writing and talks, and cross-functional work with consequential customers and technology partners.

Mechanism-building leadership

Decision systems, operating cadence, accountability, training, and feedback loops that move strategy into daily work.

MIRROR THE PRESSURE

Scale without losing control

Capacity and capability grow while safety, quality, delivery, reliability, and customer confidence remain non-negotiable.

Standardize without flattening advantage

One language for performance and decisions; protected process knowledge where it creates customer value.

Modernize without disconnecting from the work

Automation, data, and AI tied to decisions, human authority, adoption, economics, and measurable outcomes.

Move fast through earned trust

Listen at the work, expose the current system, prove one consequential mechanism, and scale what works.

CALIBRATED QUESTIONS

- What would make this hire an unmistakable success twelve months from now?
- Which first-year decision will best reveal integrated customer, technical, and financial judgment?
- Where are site leaders solving enterprise problems without enterprise visibility or authority?

THE COMPELLING CASE

This combination is the through-line of Russell's career. Advanced manufacturing, high-reliability quality, distributed execution, robotics, technical translation, and operating-system construction are already connected. The opportunity is to put that integrated leadership profile against the company's most consequential manufacturing decisions.
