

Earn the right to reshape the network.

Evidence-first entry sequence

0-30 | READ THE PROMISE

■ Listen at the work

Visit or virtually observe representative sites; meet operators, technicians, engineers, quality leaders and site heads.

■ Map the customer promise

Identify critical products, service levels, reliability requirements, recovery commitments and customer concentration.

■ Baseline with confidence

Define safety, quality, delivery, cost, productivity, utilization, capacity, NPI and talent measures with source and confidence.

■ Protect continuity

Make no broad structural change before understanding current risk, authority and technical dependencies.

OUTPUTS

- Stakeholder and decision map.
- Customer-promise and critical-capability map.
- Top risk and constraint register.
- Metric-definition and data-confidence record.

31-90 | Make the shape visible; prove the contract

Convert discovery into one shared decision mechanism

31-60

- **Expose network shape**

Map site roles, process capability, redundancy, single points, flex options and partner dependencies.

- **Clarify authority**

Define enterprise, business, site, engineering, quality, finance and supply-chain decision rights.

- **Select the proof**

Choose one real cross-site capacity, NPI, footprint, make-buy or transfer decision with sponsor and decision date.

61-90

- **Run the proof**

Apply the Manufacturing Shape Contract and document assumptions, alternatives, risks and confidence.

- **Establish cadence**

Launch weekly promise-risk, monthly operating-economics and quarterly network-shape reviews.

- **Build adoption**

Co-design with site leaders and train teams on decisions, not slide templates.

- **Stabilize now**

Address a small number of visible safety, quality, delivery or constraint issues.

EVIDENCE

- One improved cross-site decision record.
- Clear owners and escalation paths.
- Site-leader pull for the mechanism.
- Credible early execution wins.

91-120 | Commit the manufacturing portfolio

Sequence choices, capital, capability and leadership action

■ Protect

Strategic process capability, customer-critical capacity, safety and quality systems, technical centers and leadership depth.

■ Improve

Yield, uptime, labor productivity, flow, maintenance, quality loss, working capital and decision latency.

■ Flex / Partner

Qualified alternate capacity, make-buy boundaries, surge response, supplier and contract-manufacturing posture.

■ Expand / Stop

Sequenced capital, footprint changes, technology moves and sunset decisions with owners and review dates.

LEADERSHIP OUTPUTS

- Weekly, monthly, quarterly and annual operating calendar tied to real decisions.
- Leadership bench map: critical roles, successors, gaps, development and retention risk.
- Prioritized capital portfolio with assumptions, alternatives, timing, risk and benefits.
- Bounded transformation backlog by customer risk, economics, readiness and change burden.

CREDIBLE EVIDENCE BY DAY 120

Leaders describe the same priorities and decision rights; top customer, capacity, technical and leadership risks have owners; one consequential decision improved; metrics expose confidence; and the portfolio distinguishes what to protect, improve, flex, expand, partner or stop.
