

Change the shape. Hold the promise.

Vice President, Global Manufacturing Strategy | Confidential Organization

Hiring Committee,

The mandate behind this role is not simply to run plants. It is to make a technically diverse global manufacturing network behave like one enterprise system: scalable enough for growth, disciplined enough for margin, capable enough for technology transition, and reliable enough to protect every customer commitment.

My career has been built at the intersection of technical manufacturing, quality, distributed operations, customer promise and emerging technology. At Compunetics, I progressed through R&D, production, strategic acquisition, operations and director-level leadership in advanced electronics and high-reliability environments. At Amazon, I led 24/7 launch and execution supporting approximately five million second-day orders annually. At Vape-Jet, I now connect production, quality, purchasing, engineering, customer, support, telemetry, ERP and AI-assisted workflows in a robotics and machine-vision business.

My candidate thesis is direct: standardize the operating contract; differentiate the technical capability. The enterprise should share one language for safety, quality, delivery, cost, capacity, capital, escalation and learning. Sites should retain the process knowledge and judgment that create real customer value.

I have not claimed a verified five-year record as a global manufacturing VP. I would ask you to evaluate the transferability of the operating mechanisms I have built and the rigor of my entry plan. I would begin by learning the network with site leaders, clarifying decision rights, and proving one consequential capacity, NPI, footprint, make-buy or technology-transfer decision before scaling broader change.

The independent candidate vision at <https://russelldudek.github.io/VPConfidential/> includes the Manufacturing Shape Contract, executive scorecard, interview thesis, hard-objection analysis and first-120-day plan.

Carpe diem, Russell Dudek
