

Manufacturing Shape Review

A recurring mechanism for promise, capability, capacity and control

■ 1 | Promise

Which customer, safety, quality, delivery or recovery commitment is at risk or changing? Define non-negotiables.

■ 2 | Capability

Which process knowledge, technology, site competency, supplier, utility or talent dependency matters? Protect real differentiation.

■ 3 | Capacity

What constraint, utilization, demand, make-buy, capital and timing evidence changes the configuration? Compare options.

■ 4 | Control

Who decides, who executes, what escalates, what is measured, and how does learning return? Make execution durable.

REQUIRED RECORD

- Decision, owner, scope, timing and review point.
- Demand, capability, cost, timing, quality, resource and customer assumptions.
- Alternatives: protect, improve, flex, expand, partner, transfer, consolidate or stop.
- Baseline, units, source, freshness, uncertainty and missing proof.

Scorecard and cadence

Define baselines, units, ownership and confidence before targets

BALANCED SCORECARD

- **Safety**
Events, leading observations, corrective closure and process safety.
- **Quality**
Escapes, yield, scrap, rework, capability and recurrence.
- **Delivery**
Service, schedule, past due, recovery and constraints.
- **Cost / productivity**
Conversion, labor, uptime, maintenance, inventory and losses.
- **Capacity**
Rate, utilization, bottleneck, demand and flex.
- **NPI / technology**
Readiness, capability, training, yield and ramp risk.
- **Leadership**
Critical-role coverage, succession, skill depth and change load.

CADENCE

- Weekly: promise risk, containment, customer impact, owner and recovery date.
- Monthly: operating economics, root cause, productivity, capacity, quality loss, cash and closure.
- Quarterly: network shape, footprint, capital, make-buy, technology and leadership.
- Annual: growth, portfolio, product roadmaps, risks, transitions and investment sequence.
